00.Case Statements

Sunday, March 15, 2026 3:38 PM

Case syntax:

```
case "$var" in
        name 1 | name 3)
                body of-command
        ;;
        name 2 )
                body of command
        ;;
        *)
                body of default
        ;;
esac
```

! after a match it will not continue searching for other (possible) matches

! ;& instead of ;; executes all the other branches afterwards no matter if they match or not
;;& goes thru all cases and matches all applying
