03.vim Crash Course

Sunday, March 15, 2026 3:37 PM

Up / down → arrows, j, k

- n → normal/navigation mode
- i → insert mode
- esc → back to normal mode
- :w → write the file
- :q → to quit vim
- . → replays last command
- dd → while in normal mode, delete current cursor line
- p → paste (if after a dd, the dd works as copy)
- yy → copies a line
- o → add newline after current one
- shift + o → add newline above current one

A bash script is essentially just commands

To run a bash script: bash script.sh

Extension: .sh
