03.IFS Variable

Sunday, March 15, 2026 3:38 PM

built in bash, special variable
used to determine how to break up arguments, how to split words
? by default set to space newline tab
* stringify the array based on the first character in IFS
It can be set to other characters (like , or ;)

Everything created between parenthesis () is in a subshell and will be lost outside of it (local scope)
