00.Man Pages

Sunday, March 15, 2026 3:37 PM

- man 'command' provides complete documentation for a command + all possible flags
- man N 'command' provides the manual of the command in the Nth section
- man man manual of man and all of its sections

! Commands can be of 2 types: external and built-in

- man -f 'command' - short desc + section number
- help 'command' 'man' equivalent for bash built ins
- which 'file' where on the system the file exists

! A command built in the shell will print nothing when 'which command' is run

- 'type file' presents the type of the file (for built in command it will display 'is a shell builtin')
- 'type -a file' it tells you everything about the file

! There are programs / files that are both builtin and external (e.g. echo)

- 'compgen -b' list all builtins

- 'compgen -b' list all builtins
