01.Programs and Commands

Sunday, March 15, 2026 3:37 PM

- file 'file' what type of file it is

Path resolution - builtin environment variable called PATH (because it is a variable it has to be used with $PATH) Here are all paths ['file'] checks separated by ':', it will check all path for an executable named as we given and select the first one it sees. It is accessible to other programs

- tr current new replaces all 'current' with 'new'

- $PATH = 'dir1 : dir2 :' to setup the variable
