# 05.Intermediate key bindings and jumps

Thursday, March 19, 2026 8:34 PM

>> indenting to right } if the line is selected, it is
<< indenting to left } enought to press once

## Visual line mode

shift + v - selects lines

## Visual block mode

ctrl + v - select characters on columns

== auto indent line } just press once if an area is selected
gg=G autoindent the whole file

/word search for that word
n jump to the next
shift + n go to previous
?word same search, but backwards

select a sequence of characters in visual mode, then with # search for his occurances up or *' for its next occurances

m char make char a waypoint (mark char)
'char to jump to that mark
zz centers cursor in the middle of the screen
:%s/word1/word2/g replaces every occurance of word1 with word2 in the file
• executes the last executed command
