02.Associative Arrays

Sunday, March 15, 2026 3:38 PM

Stores key - value pairs
→ each key is unique and has an associated value

declare -A name - to declare such an array

! echo "$arr" does not print anything

echo "${arr[key]}"
invalid key → empty string

! * and @ work the same as in indexed arrays (loop over values)

echo "${!arr[*]}" → loop over keys

"${arr[$var]}" to look for the key stored in var. without $ it would look for the literal string
