01.sed, awk, and grep

Sunday, March 15, 2026 3:38 PM

/etc/passwd - users on system
chsh - change shell
tr dane xxxx - treats each character separately
sed 's/name/replacement/' to replace on instance
→ supports regex pattern matching
→ -e expr 1 -e expr 2 to chain more changes
→ the delimiter char can be changed #, $, etc
awk ' ' command executed in awk
{ } for each line
print $0 print the whole line
print $1 print the first field (del by space)
-F: use : as delimiter
printf ("%s test %s", $1, $7);
prints the first column, test, and 7th column
$1 == test conditional

sort - sorts the input
uniq - leaves only unique data
-c frequency count
wc - word count
-l no of lines -w words -c characters
