00.Terminal and Finder

Saturday, March 14, 2026 12:41 PM

Terminal – REPL (read eval print loop)
- a program that provides an interface

Shell – a program running in the background
- command line interpreter
- translates the text from terminal into instructions

Bash – Bourne Again SHell
- specific type of shell
- wait for input, read the input, evaluate the input, print any sort of output, loop back
- always in a directory

Commands

- pwd print working directory
- ls list all files in current directory
- touch 'name' creates a file named 'name'
- rm 'name' removes file named 'name'
- clear clears the terminal
- cd 'name' change directory to 'name'

A directory is the same thing as a folder
