01.Basic File Manipulation

Saturday, March 14, 2026 5:46 PM

Commands

- mv 'old_name' 'new_name' rename a file from 'old_name' to 'new_name'

! If you 'accidentaly' rename a file to a name already used, it will overwrite the original file

- rm -i (interactive) - will ask for confirmation
- up and down on keyboard - you can go back and forth in the history of written commands
- alias test1 = 'test2' when writing test1 it will act like we wrote 'test2'
- alias test1 prints to what it is refrencing to (or the fact that it is not refrencing to anything)
- CTRL+L clears the screen
- history prints all commands in history

name - *

↳ glob\ wildcard
