03.Searching in Files

Saturday, March 14, 2026 7:05 PM

Commands

- cat 'name' prints the content of a file to the terminal
- grep 'pattern' 'file' search for the pattern in the file
- grep '^pattern' 'file' match the beginning of the line (the results have to start with 'pattern')
- grep 'pattern$' 'file' ends with the 'pattern'
- echo 'text' prints 'text' to the terminal
- echo 'text' > 'file' overwrite the content of the 'file' with 'text'
- echo 'text' >> 'file' append: create the file if it does not exist and put the text in it OR add the text at the end of the file if it exists
- grep -An 'pattern' 'file' prints matches + n lines after
- grep -Bn 'pattern' 'file' prints matches + n lines before
- grep -Cn 'pattern' 'file' prints matches + n lines both before and after
- grep -i 'pattern' 'file' grep with case insensitivity
- grep -o 'pattern' 'file' print only the part that matches the pattern
- grep 'pattern.' 'file' searches for the pattern followed by exactly 1 more character

You can use multiple flags grep -i -o even together grep -io
-i -o etc. can be reffered as arguments or flags

Pipelines in bash

→ very powerful
→ gives the output of a command as the input of other command
→ ex: cat file-1.txt | grep -i text
