04.Paging files

Saturday, March 14, 2026 7:37 PM

There are program that pages thru the input in order not to display the whole content of a file at once.

- less 'file' prints the first part of the file and using arrows or j and k you can move up and down in the output
- /'pattern' searches for the pattern
- n for jumping thru the search results forward
- n + shift for jumping thru the search results backwards
- q quits the pager
- more 'file' pretty much the same as less
